

AI-Based Freelance-Startup System Progress Presentation

Week 06

Contents

CATALOGUE

- 01** Project Positioning
- 02** Weekly Progress
 - 2.1** Platform Architecture
 - 2.2** AI & Intelligent Layer
- 03** Planning and Next Steps

01 Project Positioning

Current Phase

Phase 1: Intelligent Foundation

Focus: System Design and Core Architecture

Goal of Week 06: Link all components together to get a real app

Current Phase

Phase Tasks:

1. Database Modeling
2. AI Recommendation Tool (Candidate Match)
3. Profile Analyzer Tool
4. AI Predictive Tool
5. Selection and Mission Update
6. Mission Deployment
7. Application Tracking System
8. Profile Engineering and Authentication

Phase Tasks:

1. Database Modeling
2. AI Recommendation Tool (Candidate Match)
3. Profile Analyzer Tool
4. Selection and Mission Update
5. Mission Deployment
6. Application Tracking System
7. Real -Time notification system
8. Profile Engineering
9. Performance Score (Freelancer Side)
10. Contract Generation
11. Sign-in / Sign-up (JWT Authentication)

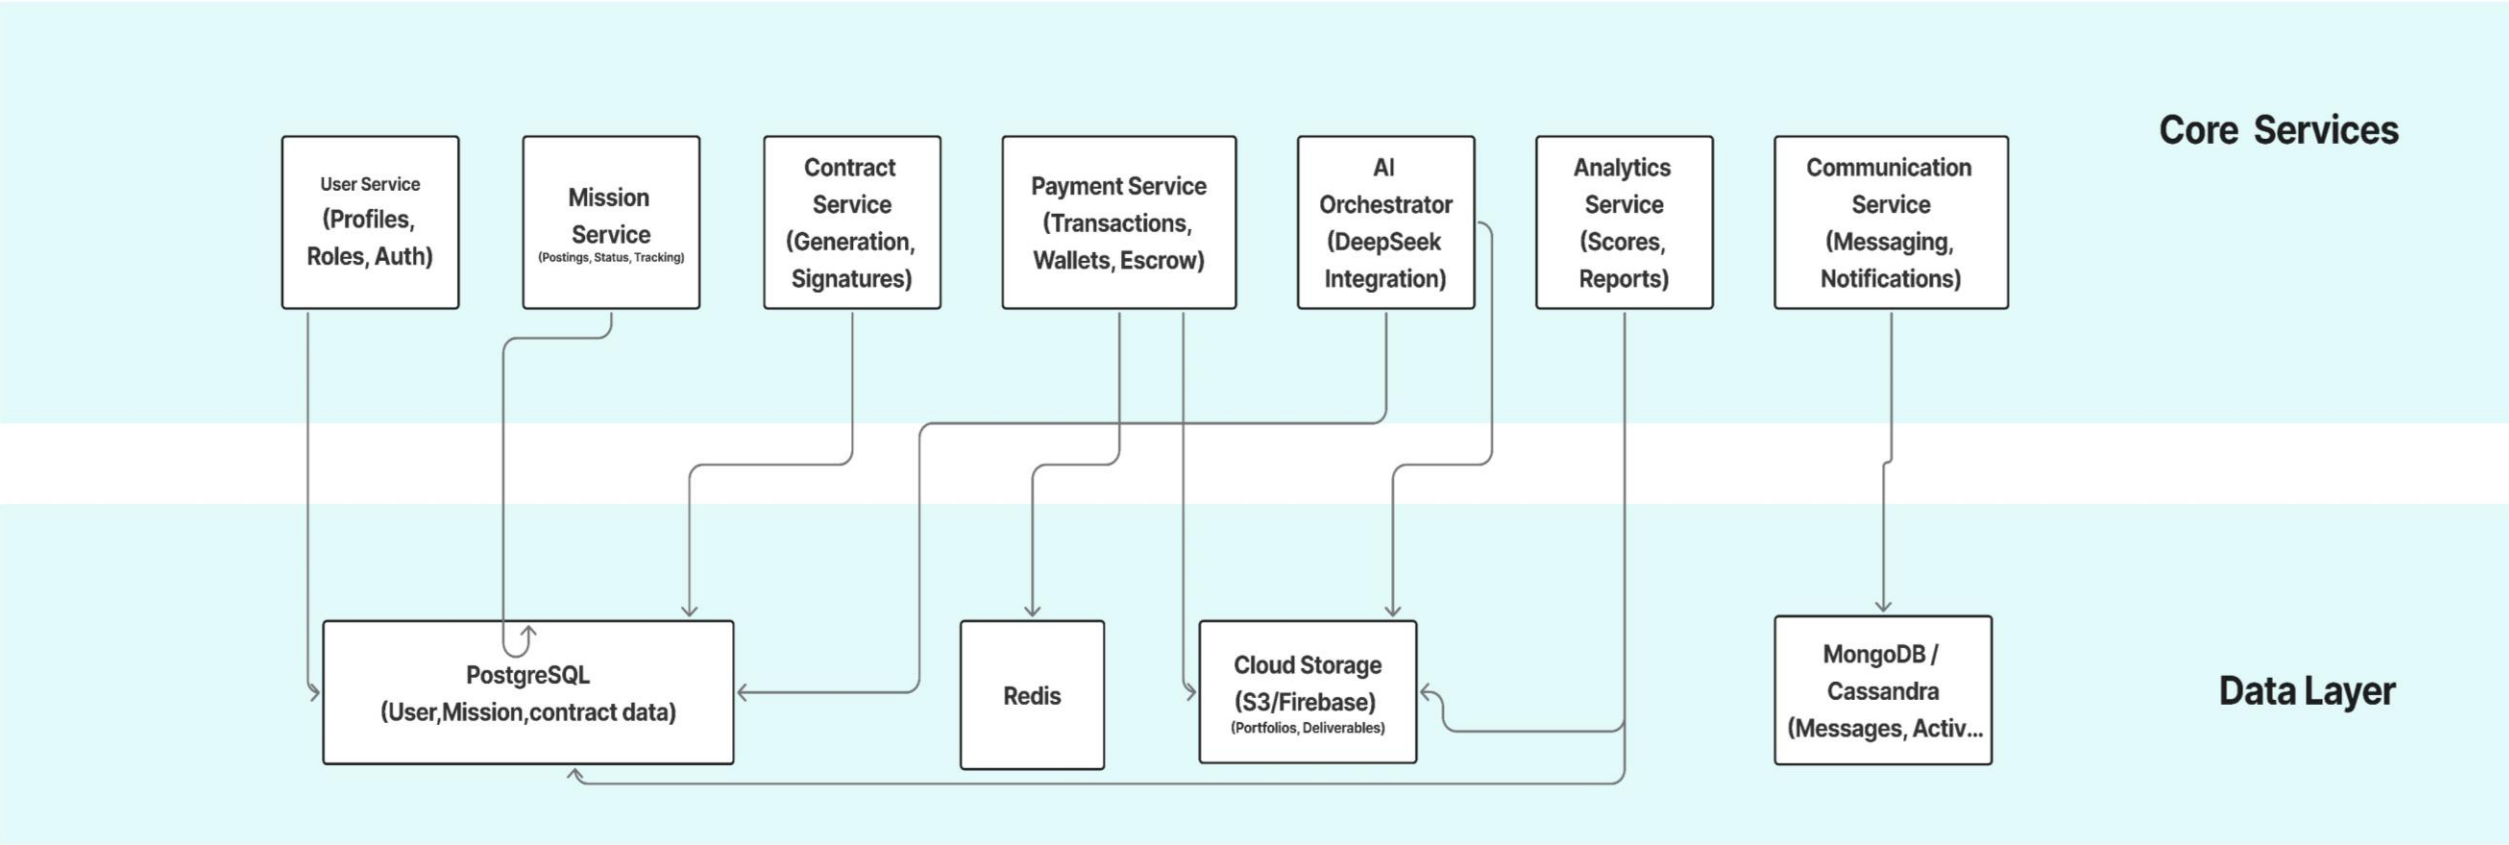

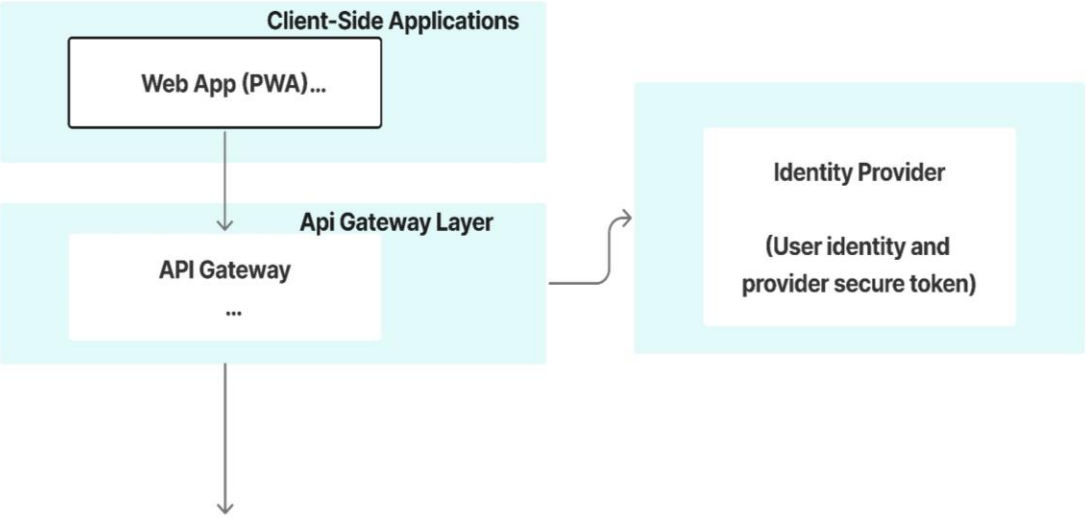

Weekly Objective

- 1 Integrate all Phase 1 components into a fully functional system (main objective).
- 2 Launch Phase 2 and Phase 3 concurrently to accelerate overall development.

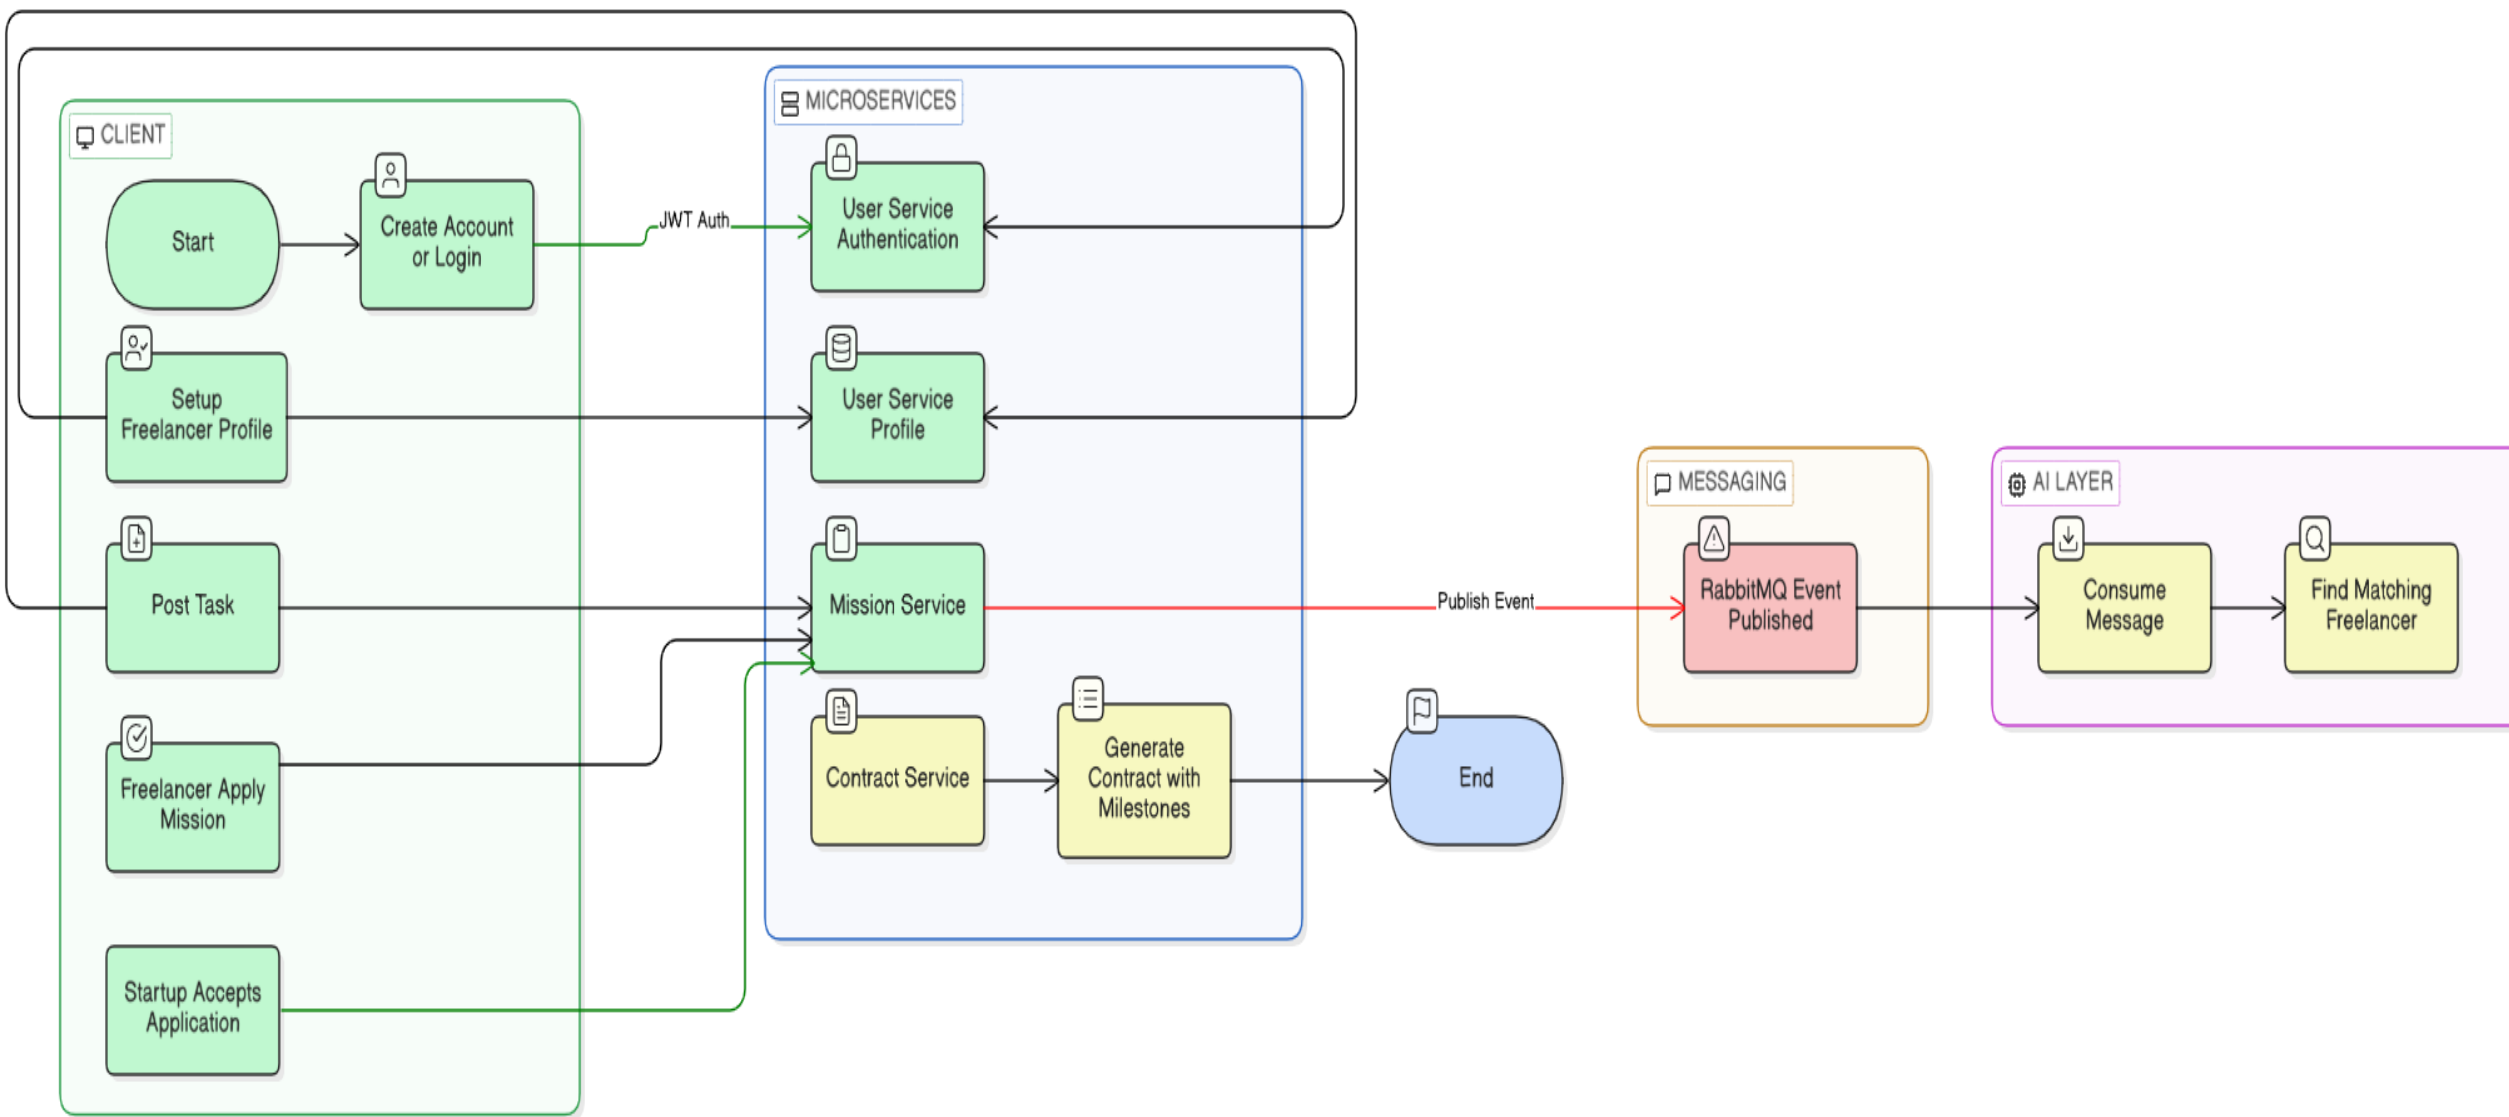

02 Weekly Progress

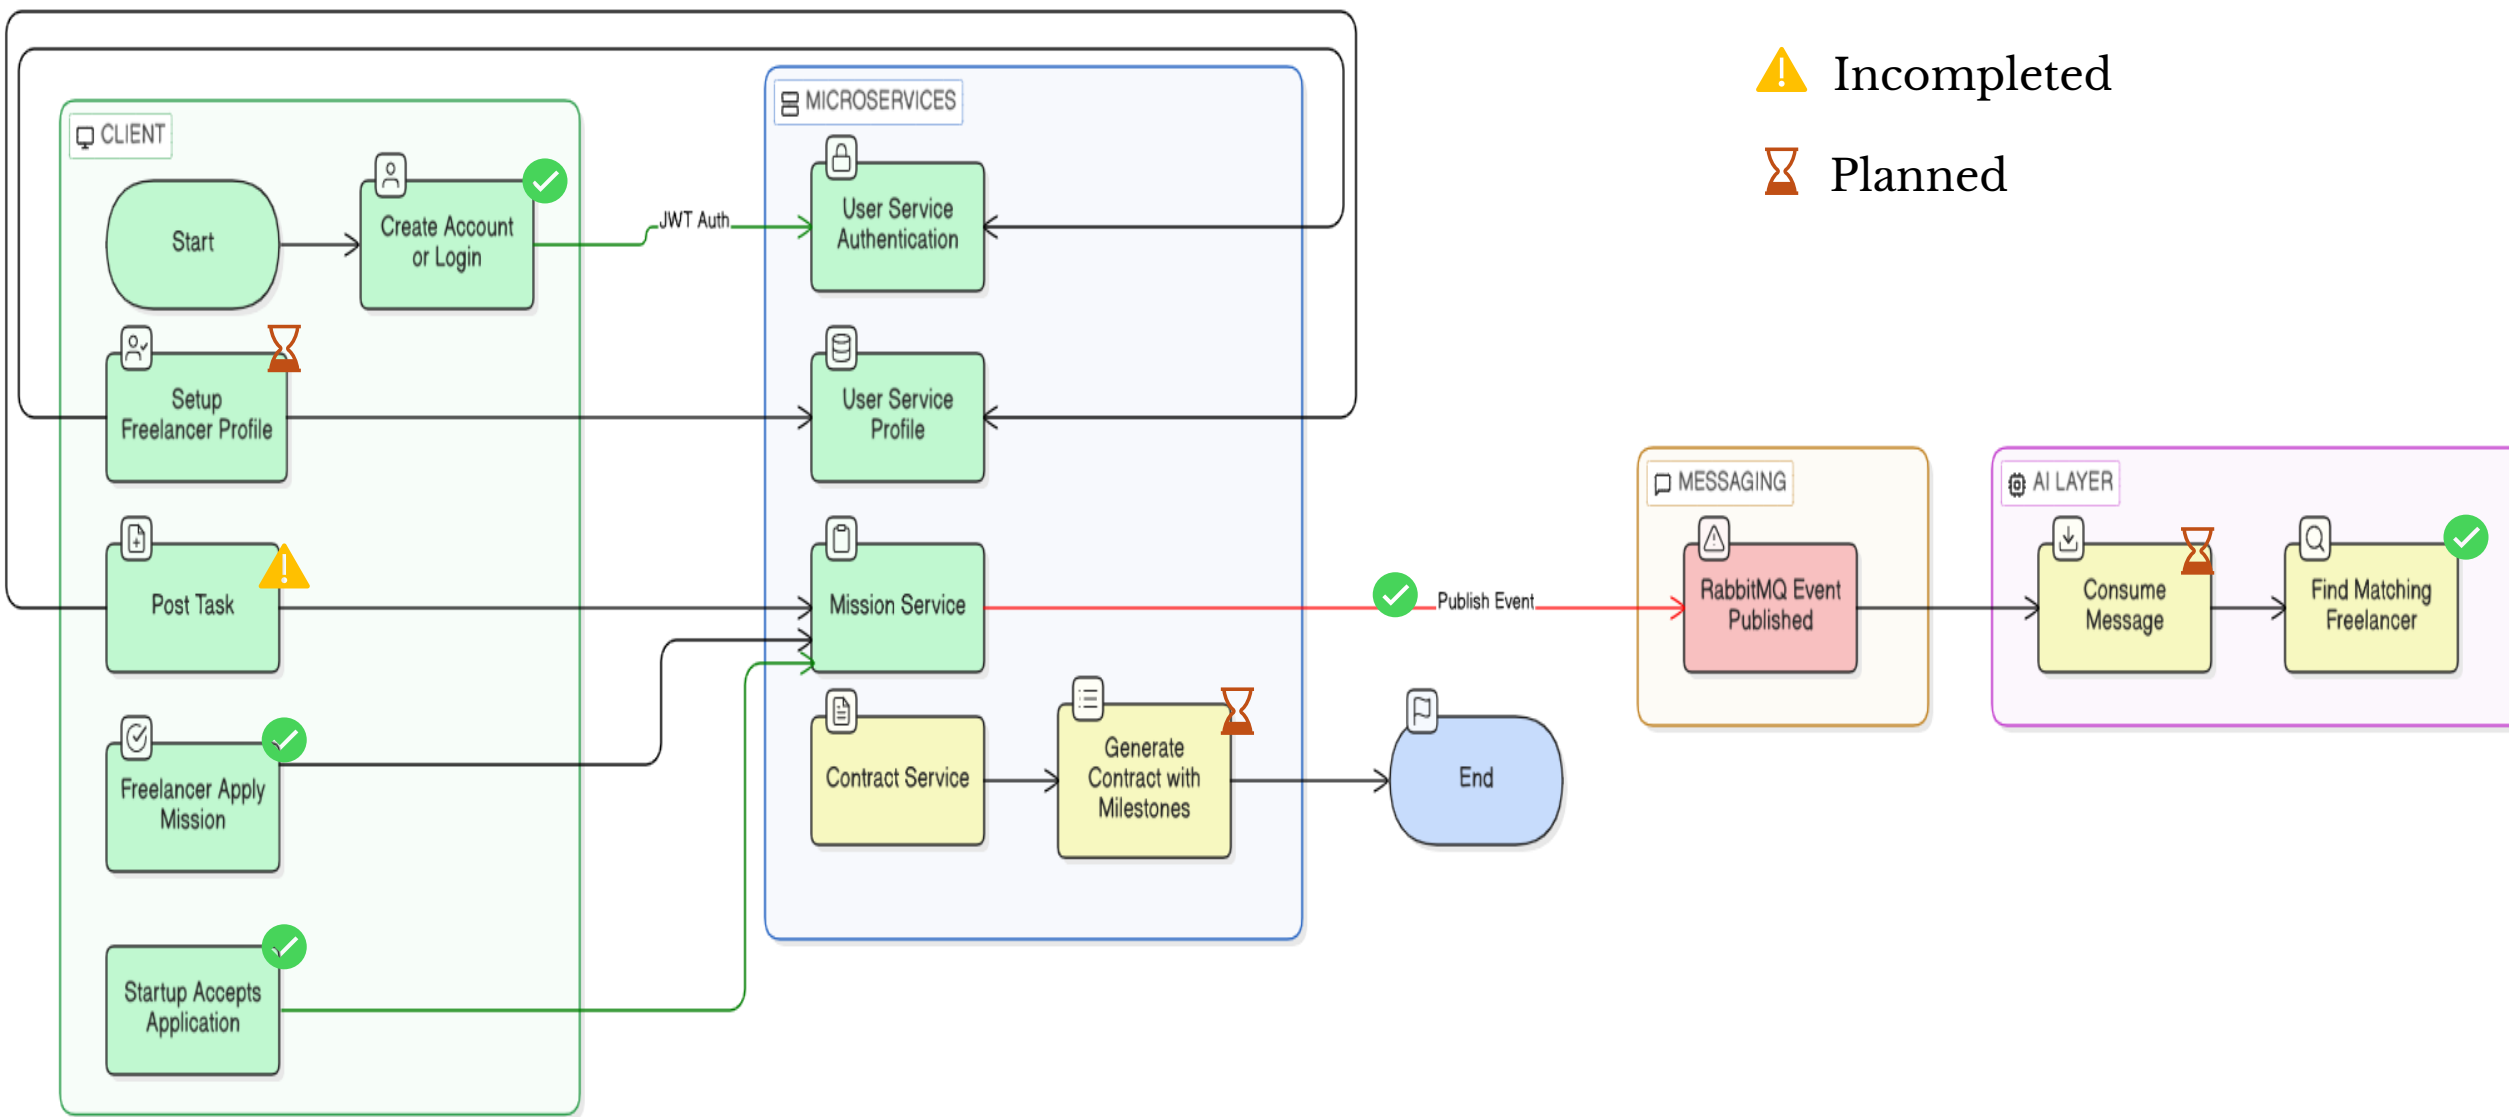

Project Architecture

Project Architecture (Phase 01)

Project Architecture (Phase 01)

Project Architecture (Phase 01)

- ✓ Done
- ⚠ Incompleted
- ⌚ Planned

Phase Tasks:

- Database Modeling ✓
- AI Recommendation Tool (Candidate Match) ✓
- Profile Analyzer Tool ✓
- Selection and Mission Update ✓
- Mission Deployment ⚠
- Real -Time notification system ✓
- Profile Engineering ⚠
- Performance Score (Freelancer Side) ✓
- Contract Generation ⌚

2 AI and Intelligent Layer

2.1 Integrated Tools

1. Freelancer Tools

search freelancer
get freelancer profile

2. Company and Mission Tools

get company profile
search mission
get mission details

3. AI Matching and Analysis

calculate compatibility score
find best matching mission get
matching missions

4. Advanced Deep Analyzers

analyser for freelancer profile

2. AI and Intelligent Layer

2.2 Architecture and Methodology

RAG system (Agentic):

Standard AI, decides which platform "tools" to run (querying PostgreSQL, calculating scores, fetching analytics) to provide factual, data-driven responses.

Event-Driven Matching (EDA):

Integrated with RabbitMQ, When a startup posts a job, the AI Orchestrator automatically wakes up, scans the entire freelancer pool, and pushes recommendations back to the ecosystem without any human intervention.

Weighted Compatibility Scoring:

It uses a multi-dimensional scoring algorithm that evaluates candidates based on:

- * Skill Overlap and Proficiency: (35%)
- * Rate Alignment: (25%)
- * Experience Level: (25%)
- * Success Rate/History: (15%)

2. AI and Intelligent Layer

2.2 Architecture and Methodology

Automated Matching Workflow :

1. **Event Trigger:** A Company publishes a mission » ``mission-service`` emits a ``mission_published`` message to RabbitMQ.
2. **Ingestion:** ``worker.py`` receives the message and fetches the full mission details (skills, budget, requirements).
3. **Discovery:** The service queries the database to find freelancers whose skills overlap with the mission requirements.
4. **Scoring:** Each potential candidate is passed through the **AI Scorer** (``database.py``) to calculate a match percentage (0-100%).
5. **Recommendation:** Candidates with a score above 20 are sorted and sent back to RabbitMQ.
6. **Notification:** The platforms' WebSocket service picks up these matches and notifies the Freelancer: **"We found a mission that fits your profile!"**

Key Technologies :

- * **FastAPI:** High-performance Python web framework.
- * **RabbitMQ (aio-pika):** Asynchronous message brokering for the event-driven worker.
- * **PostgreSQL:** Primary data source for the matching engine.
- * **Llama 3 :** Large Language Models used as the reasoning core

2. AI and Intelligent Layer

2.3 Matching Test Screenshots

Bridge-Project docker exec bridge-postgres psql -U postgres -d FreelanceStartupsPlatform -c "SELECT id, title FROM project_service.missions LIMIT 1;"

id	title

03

Planning and Next steps

Plan for the Next Week

- 1 Integrate all Phase 1 components into a fully functional system (main objective).

Thank you
